

# 19C Series 0 to 3psi to 0 to 500psi

Low Cost, Stainless Steel Isolated Pressure Sensors

## General Description

The stainless steel 19C Series devices were developed for pressure applications that involve measurement of hostile media in harsh environments. These sensors will accommodate any media that will not adversely attack 316 stainless steel.

These 19mm sensors are available for use with either a constant voltage or current source. They feature a variety of pressure connections to allow use in a wide range of OEM equipment.

The 19C Series devices are rugged and reliable transducers for use in a wide variety of pressure sensing applications where corrosive liquids or gases are monitored. Contact your local Invensys representative or the Invensys factory for additional details.

## Features

### Reliable Semiconductor Technology

- Calibrated and Temperature Compensated
- Isolated
- Rugged--Stainless Steel Package
- Small Size
- Absolute & Gage Pressures
- Reliable Semiconductor Technology

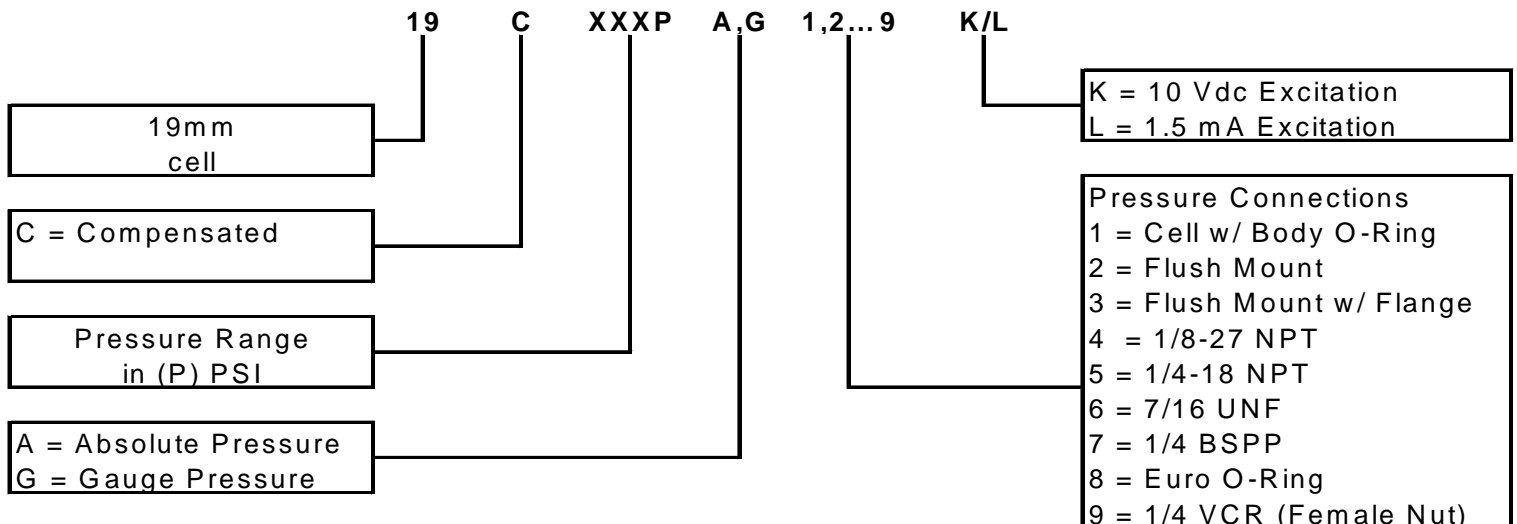

## Applications

- Industrial Controls

## Equivalent Circuit

## Ordering Information - Part # Description

For example: Part #19C100PA4K = 19 mm Cell, Compensated, 100 psi, Absolute, 1/8NPT Port, with 10 Vdc excitation.

**Pressure Sensor Characteristics (all devices)****Environmental Specifications**

Compensated: 0°C to +82°C

Operating: -40°C to +125°C

Storage: -40°C to +125°C

Vibration: 10G at 20-2000 Hz

Shock: 100G for 11 msec

Life: 1 Million cycles minimum

Insulation Resistance 100MΩ at 50 Vdc

**Maximum Ratings (all devices)**Voltage Version "K": Supply Voltage  $V_S = +15$  VdcCurrent Version "L": Supply Current  $I_S = +2.0$  mA**Pressure Range Specifications**

**Specification Notes:**

- Note 1:** Reference Conditions (unless otherwise noted): Supply,  $V_S=10\text{ Vdc}\pm 0.01\text{ Vdc}$  or  $I_S=1.5\text{ mA}\pm 0.0015\text{ mA}$ ;  $T_a=25^\circ\text{C}$ .
- Note 2:** Span is the algebraic difference between the output voltage at full scale pressure and the output at zero pressure. Full Scale Span (FSS) is ratiometric to the supply voltage.
- Note 3:** Linearity is based on best-fit straight line from the zero to the full scale pressure. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
- Note 4:** Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25°C reading.
- Note 5:** Long term stability over a six month period.
- Note 6:** Response time for a step change from the zero pressure to the full scale pressure.
- Note 7:** The maximum pressure that can be applied without changing the transducer's performance or accuracy.
- Note 8:** The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.
- Note 9:** Common Mode Voltage as measured from output to ground.

Note1: Non-concentricity effects at the diaphragm weld area may cause run out of up to  $\pm 0.006$ " between the upper and lower portions of the sensor body. (It is recommended to use a counter bore in the mating bore used with this device to allow for this non-concentricity.)
